PROFILE

I am a Web Developer in Orlando. I chose this career because I have a passion for creativity and solving real world problems. I love the challenge of learning something new, I see a project as a mystery that needs to be solved and I enjoy the path of putting the puzzle together. I am also veteran with a DOD secret clearance, good team player and I like to work hard to the finish.

EDUCATION

B.S. of Web Development, Full Sail University

WINTER PARK

Jun 2017 — Sep 2020

EMPLOYMENT HISTORY

Jr Web Developer, OM - Orlando Marketers

Orlando

Sep 2019 — Jun 2020

My role at Orlando Marketers was to build, maintain and optimize websites for clients. My role at OM was responsible for but not limited to :

- Assist in the development of new websites and webpages and microsites, operating within brand style guidelines and coding standards.
- Perform maintenance and enhancements to existing websites.
- Use two types of CMS systems including WordPress and Shopify.
- Cross-testing design on multiple browsers and mobile devices.
- Implementing version control throughout creation and maintenance of websites.
- Assist lead developer in web-app projects in Vue for front-end design and development.
- Flexibility in working remotely and in-shop.
- Manage tasks and workflow in Asana to keep clean communication between team members.

Hull Maintenance Technician, US Navy

San Diego, CA

Mar 2013 — Jan 2017

Use of web applications to order and stock welding/plumbing shop with necessary tools and supplies. Inventory and update of all computers, printers and devices for the Repair Division onboard USS Boxer.

Team building, organization and leadership are skills that I have learned from this employment experience and bring with me to my future career.

EXPERIENCE

Sprints - MERN Stack

Orlando

Aug 2020 — Present

The Sprints MERN-Stack App is my final project for school. A simple project manager application where teams can add sprints, tasks and comments to track projects. I will continue to work on this to learn and as a playground to build development skills.

The project can be found here - <https://sprints-fs.herokuapp.com/>

Squid Quiz - MERN Stack

Jun 2019

In my last advanced database class, I built a quiz app designed for US Navy sailors to be able to make their own quizzes to practice for advancement exams or boards. The project was built using first vanilla JS, building a web and API server, then converting that into a React app with Node.js and Redux.

Fruit App / LAMP Stack

May 2019

For this project I used PHP to build a grocery cart application where the user can input what they want on a grocery list along with using Bootstrap to create the layout of the app. I used VirtualBox with Vagrant and Ubuntu to create the server and MySQL for the database. This project was also recreated using CodeIgniter framework for some experience in PHP frameworks.

TV-Buff / React.js APP

Mar 2019

This app was built with React.js and pulls from TV Maze API to search for TV shows and actors. A user can search for shows and actors via search bar. A description page is loaded when the user clicks on an actor/show card and a user can also add their favorites view them later. This application is currently being converted to a MERN stack application for back end compatibility.
